

ECOLOGY AND ENVIRONMENT, INC.

REGION VI

MEMORANDUM

TO: Dave Peters, Chief  
Hazardous Waste Section

FROM: Michael Benner, Geologist

THRU: K. H. Malone, Jr., RPM *KHM*

DATE: December 13, 1983

*OKD098470875*

SUBJ: Reconnaissance Inspection, **Baker Packers** Completion Systems,  
Broken Arrow, OK (OK 4596)  
TDD #R6-8310-18

On October 20, 1983, the FIT received a directive from the Environmental Protection Agency (reference above TDD) to perform a preliminary assessment/reconnaissance inspection of Baker Packers in Broken Arrow, Oklahoma.

In order to make the most efficient use of manpower and field time, existing data pertaining to this site was obtained prior to conducting the inspection. The Oklahoma Hazardous Waste Management Services was contacted to ascertain what data they had on file. In a phone discussion with Mr. Ken Bush on November 28, 1983, he reported that Baker Packers is an active RCRA generator (OKD-09-847-0875) with no inactive operations. Baker Packers has a 2000 gallon storage tank which they use to store water soluble oils. These oils, the only waste product generated, are being handled as a hazardous waste under RCRA.

Since Baker Packers is under RCRA and has no inactive operations or waste facilities no further FIT action is recommended.
